Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, composites, materials characterization, porous materials, manufacturing processes, nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optical and photonic materials, corrosion, construction and building materials, materials simulation and design, electronic materials, ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

Associate Editors-in-Chief

Dr. Christof Schneider
Prof. Dr. Guillermo Requena
Prof. Dr. Yanlin Song

Aims

Materials provides a forum for publishing papers that advance in-depth understandings of the relationships between the structures, properties, applications or functions of all classes of materials. We aim to encourage various scientific communities to publish their original experimental and theoretical research, as well as their reviews.

Scope

- To publish research related to all classes of materials including ceramics, glasses, polymers (plastics), composites, semiconductors, magnetic materials, biological and biomimetics materials, silica, dots and carbon materials, metals, and alloys from nanoscale to bulk. All kinds of functional materials used for the development of medical implants in medicine and in dentistry, as well as coatings and films, pigments, ionic crystals, covalent crystals, metals, and intermetallics, are also considered.
- To cover all aspects of materials science or materials engineering, including nanoscience and nanotechnology.
- To contribute to the advancement of material characterization techniques such as electron microscopy, X-ray diffraction, calorimetry, nuclear microscopy and spectroscopy, laser technology, optical fibers, Rutherford backscattering, and neutron diffraction, among others.
- To incite fundamental research in condensed matter physics and materials physics, continuum mechanics and statistics, mechanics of materials, tribology (friction, lubrication, and wear), solid-state physics, etc.

The journal will not consider submissions that only present clinical cases, or that only cover geological and engineering applications of natural materials (e.g., soil, rocks, loess, basalt).

Author Benefits

Open Access

Unlimited and free access for readers

No Copyright Constraints

Retain copyright of your work and free use of your article

Thorough Peer-Review

2024 Impact Factor: 3.2

(*Journal Citation Reports* - Clarivate, 2025)

Discounts on Article Processing Charges (APC)

If you belong to an institute that participates with the MDPI Institutional Open Access Program

No Space Constraints, No Extra Space or Color Charges

No restriction on the maximum length of the papers, number of figures, or use of colors

Journal Rank

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)

Coverage by Leading Indexing Services

Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases

Rapid Publication

A first decision is provided to authors approximately 15.5 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025)
